

Testing Questionnaires: McCall's Quality Model and PSSUQ

Project: CHMSU Intelligent Service Request Monitoring and Analysis Platform

System: ICT Support Ticketing System

Recommended Respondents: 5 expert evaluators and 10 end users

Purpose: Collect expert quality evaluation and user usability feedback after hands-on system testing.

Part A. Testing Instructions

Before answering the questionnaire, ask each respondent to use the system with a test account and complete the applicable tasks.

Suggested Test Tasks

Task No.	Task
1	Log in using the assigned test account.
2	View the dashboard and check ticket status summaries.
3	Submit either an MIS or ITS ticket.
4	Use the AI ticket drafting or analysis feature, if available for the account.
5	Open My Tickets and review the submitted ticket details.
6	Track the ticket timeline, status, control number, and SLA information.
7	Use the knowledge base or documentation page to find support information.
8	For staff/admin roles, review, approve, assign, update, or resolve a ticket.
9	For resolved tickets, answer the satisfaction survey.
10	Record any errors, delays, confusing steps, or missing information.

Rating Scale

Use the same scale for both questionnaires unless otherwise stated.

Rating	Interpretation
5	Strongly Agree / Excellent
4	Agree / Good
3	Neutral / Fair
2	Disagree / Poor
1	Strongly Disagree / Very Poor

Part B. Expert Evaluation Questionnaire Using McCall's Software Quality Model

Respondents: 5 experts

Suggested Experts: ICT staff, software developer, systems analyst, IT instructor, QA tester, or administrator familiar with service request systems.

Expert Profile

Field	Response
Expert Code	E_____
Area of Expertise	
Years of Experience	
Date Tested	
Role/Test Account Used	

B1. Correctness

No.	Statement	5	4	3	2	1
1	The system correctly supports the required ICT ticketing process from submission to resolution.					
2	MIS and ITS ticket forms collect the necessary information for their intended request types.					
3	Ticket statuses, control numbers, timelines, and SLA details are accurate and understandable.					
4	Role-based actions such as review, approval, assignment, and resolution behave according to the workflow.					

B2. Reliability

No.	Statement	5	4	3	2	1
5	The system remains stable while submitting, viewing, and updating tickets.					
6	The system handles invalid, incomplete, or unusual inputs without crashing.					
7	Notifications, status updates, and dashboard counts remain consistent after ticket changes.					
8	The system preserves ticket records, user actions, and survey responses reliably.					

B3. Efficiency

No.	Statement	5	4	3	2	1
9	Pages load within an acceptable time during normal use.					

No.	Statement	5	4	3	2	1
10	Ticket submission, approval, assignment, and resolution require a reasonable number of steps.					
11	Search, filters, analytics, and ticket lists help users find information quickly.					
12	AI-assisted features reduce user effort when preparing or analyzing tickets.					

B4. Integrity

No.	Statement	5	4	3	2	1
13	User roles restrict access to the correct pages, tickets, and actions.					
14	Sensitive ticket data is protected from users who should not view it.					
15	The system prevents unauthorized updates, approvals, assignments, or administrative actions.					
16	Login, logout, and session behavior are secure and appropriate for the system.					

B5. Usability

No.	Statement	5	4	3	2	1
17	The interface is easy to understand for users with different ICT skill levels.					
18	Labels, buttons, messages, and form instructions are clear.					
19	Users can easily identify what action to take next in the ticket workflow.					

No.	Statement	5	4	3	2	1
20	Error messages and validation prompts help users correct mistakes.					

B6. Maintainability

No.	Statement	5	4	3	2	1
21	The system appears organized enough to support future updates and maintenance.					
22	Ticket categories, roles, workflows, and survey records can be adjusted when requirements change.					
23	The system provides enough logs, status history, or records to help diagnose issues.					
24	Documentation and user guides are sufficient for administrators and support staff.					

B7. Flexibility

No.	Statement	5	4	3	2	1
25	The system can support different campus offices, request types, or service categories.					
26	The workflow can adapt to changes in approval, assignment, or reporting requirements.					
27	Reports and analytics can support different management information needs.					
28	The system can accommodate future improvements such as additional AI features or integrations.					

B8. Testability

No.	Statement	5	4	3	2	1
29	Main functions can be tested clearly using expected inputs and outputs.					
30	Each role's permissions and workflow responsibilities can be verified during testing.					
31	The system provides visible results after each major action, such as submit, approve, assign, or resolve.					
32	Defects or unexpected behavior can be reproduced and documented.					

B9. Portability

No.	Statement	5	4	3	2	1
33	The system works properly on common web browsers.					
34	The interface remains usable on different screen sizes, including laptops and mobile devices.					
35	The system can be deployed or accessed in the intended institutional environment.					
36	The system can be maintained across expected hardware, network, and software conditions.					

Expert Comments

Question	Response
What are the strongest qualities of the system?	

Question	Response
What defects, risks, or weaknesses should be fixed first?	
What features or improvements do you recommend?	
Overall expert recommendation	☐ Acceptable ☐ Acceptable with minor revisions ☐ Needs major revisions

McCall's Scoring Template

Quality Factor	Item Numbers	Total Score	Mean
Correctness	1-4		
Reliability	5-8		
Efficiency	9-12		
Integrity	13-16		
Usability	17-20		
Maintainability	21-24		
Flexibility	25-28		
Testability	29-32		
Portability	33-36		
Overall	1-36		

Part C. PSSUQ-Style Usability Questionnaire

Respondents: 10 end users

Suggested Users: CHMSU employees, faculty, staff, student assistants, or office personnel who may submit or monitor ICT support requests.

User Profile

Field	Response
User Code	U_____
Age Range	☐ 18-24 ☐ 25-34 ☐ 35-44 ☐ 45-54 ☐ 55+
User Type	☐ Faculty ☐ Staff ☐ Student Assistant ☐ ICT Personnel ☐ Other: _____
ICT Skill Level	☐ Beginner ☐ Average ☐ Advanced
Date Tested	
Device Used	☐ Desktop ☐ Laptop ☐ Tablet ☐ Mobile Phone

C1. System Usefulness

No.	Statement	5	4	3	2	1
1	Overall, I am satisfied with how easy it is to use this ICT ticketing system.					
2	The system helps me submit or monitor ICT service requests effectively.					
3	I can complete ticket-related tasks quickly using this system.					
4	The steps for creating, viewing, and tracking a ticket are easy to follow.					
5	The system gives clear feedback after I perform an action.					
6	The system helps reduce the effort needed to request ICT support.					

C2. Information Quality

No.	Statement	5	4	3	2	1
7	The messages, labels, and instructions are clear.					
8	Error messages explain what went wrong and how I can fix it.					
9	The ticket details, status, control number, and timeline are easy to understand.					
10	The dashboard and ticket lists show the information I need.					
11	The knowledge base, documentation, or help content is useful when I need guidance.					

C3. Interface Quality

No.	Statement	5	4	3	2	1
12	The interface layout is clean and organized.					
13	Buttons, menus, icons, and forms are placed where I expect them to be.					
14	Text is readable and the visual design is comfortable to use.					
15	The system works well on the device I used for testing.					
16	Overall, I am satisfied with this ICT ticketing system.					

User Comments

Question	Response
What did you like most about the system?	

Question	Response
Which part was confusing or difficult to use?	
Did you encounter any error or problem? Please describe.	
What improvement would make the system better?	
Would you recommend using this system for ICT support requests?	[] Yes [] No [] Not sure

PSSUQ-Style Scoring Template

Subscale	Item Numbers	Total Score	Mean
System Usefulness	1-6		
Information Quality	7-11		
Interface Quality	12-15		
Overall Satisfaction	1-16		

Part D. Summary of Respondents

Expert Evaluators

Expert Code	Expertise	Date Tested	Overall Mean	Recommendation
E1				
E2				
E3				
E4				
E5				

End Users

User Code	User Type	Device Used	Date Tested	Overall Mean
U1				
U2				
U3				
U4				
U5				
U6				
U7				
U8				
U9				
U10				

Part E. Interpretation Guide

Mean Range	Interpretation
4.21 - 5.00	Excellent / Strongly Acceptable
3.41 - 4.20	Good / Acceptable
2.61 - 3.40	Fair / Needs Minor Improvement
1.81 - 2.60	Poor / Needs Major Improvement
1.00 - 1.80	Very Poor / Not Acceptable

Recommended Computation

1. Add all item ratings under each factor or subscale.
2. Divide the total by the number of answered items.

3. Compute the grand mean for all experts and all users separately.
4. Summarize common comments and list the top issues to fix before final deployment.
